

# Shelf Assembly & Maintenance

*Shelf is a reinterpretation of the recognized Scandinavian shelf design from the 1950's. With the advantage of the simplicity and strength in the design. All collection pieces are for indoor use.*

## Contents:

In this box you will find:

- 1 Oak shelf oiled twice
- 2 Brackets (left bracket and right bracket)

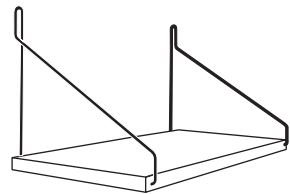

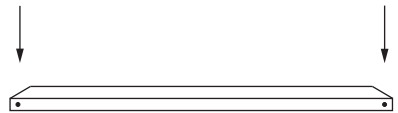

## Assembly:

Start by locating the front of the shelf, in which the small holes are located *closest to the edge* of the wood. The back of the shelf is stamped with a Frama logo.

Separate the left and right brackets by placing the *diagonal* part of either bracket *closest* to the edge of the shelf.

Beginning with the front side, insert the metal bracket inside the front hole close to the edge. Repeat on the back end of the bracket.

*To preserve oiled appearance of wood shelf over time, oil the oak using a natural wood oil. Plated copper and brass brackets will develop patina over time. Spot clean both shelf & brackets with a dry cloth.*

*Once assembled, please note the shelf can hold up to 15 kg (depending on wall and mounting) Size of screw should be Ø 6-8 mm for holding heavier objects.*
