

CODE 2

Nana Bambuch 2009

CODE 2, MDF anthracite, American walnut veneered

Aesthetically, CODE's structure is based on the graphic motifs found in the cladding of Modern architecture. These have been converted into a rectangular - one height/ one width/ one depth - outer frame with a highly differentiated interior. The four compartment modules can accommodate a wide range of articles: books, files, paperbacks, DVDs and CDs.

In addition to its pure yet complex graphics, CODE is distinguished by extreme lightness of the structure, all its elements having a uniform thickness of 10mm. The system is self contained, which means that reconciling lightness and stability was the biggest challenge of the project. The shelving assembled of wood-veneered MDF panels gains stability thanks to a specially developed sandwich construction.
